BRAND & REPORT GUIDELINE

BRAND GUIDELINE

BRAND INTRODUCTION

Buzzmetrics, is the **leading Social media and E-commerce Market Research company**.

Buzzmetrics is the **pioneering company** in applying **market research methodologies** to social media since 2013. With over a decade of experience, we specialize in connecting and analyzing **social media conversations** and **e-commerce data**, helping brands uncover meaningful consumer insights. By integrating these data sources, Buzzmetrics provides a **holistic view** of consumer behavior — empowering businesses to make smarter decisions and optimize their strategies for **Digital Commerce success**.

BRAND MISSION & VISION

Mission: To deliver trusted, research-based insights by connecting Social and E-commerce data — enabling brands to understand consumers better, make smarter decisions, and succeed in Digital Commerce.

Vision: To be the most credible and insightful Social & E-commerce Market Research company in Southeast Asia.

DEFINING BUZZMETRICS' VOICE

VOICE CHARACTERISTICS

- **Trustworthy and Professional:** Instill confidence in the audience.
- **Knowledgeable and Insightful:** Showcase your expertise and market understanding.
- **Innovative and Forward-Thinking:** Highlight your role as a leader in the industry.
- **Accessible and Engaging:** Maintain clarity and avoid jargon to connect with diverse audiences.

CORE MESSAGE

Buzzmetrics is the **leading social media & e-commerce market research company** bringing Insight for Planning and Business Impact

TONE VARIATIONS

- **Category Reports + Document:** Formal, data-heavy, deep insight.
- **Social News:** Engaging and trend-sensitive.
- **Webinars/Events:** Insightful & Inspiring

KEYWORDS

Impact, Insightful, Planning, Social Media & Ecommerce, Market Research

BRAND VOICE GUIDELINE

DOs

- Social media & E-com research: Market research based on social media & e-commerce data.
- Avoid confusing Keyword: Social Listening, Social Monitoring, Social Tools, Listening Platform
- Emphasize data accuracy, deep analysis, and actionable solutions
- Be clear, direct, and action-oriented to reflect "insight for business impact"
- Communicate quality of insight, expertise, and actionability to justify pricing

DON'T s

- Use all the phrases Social Listening, Social Monitoring, Tools, Platforms interchangeably.
- Don't exaggerate, over promise, or make unverified claims (e.g., "We're the best in the industry")
- Avoid vague, fluffy, or overly technical language without explanation
- Don't appear biased or overly aligned with any one party (e.g., specific agencies or influencers)
- Avoid talking about cost alone or competing purely on price vs. lower-cost alternatives

LOGO & APPLICATIONS - Buzzmetrics

OFFICIAL LOGO

LOGO POSITION

LOGO DON'T

The final logos which is used in Buzzmetrics' document

Full-color version

Alternate versions

LOGO & APPLICATIONS

OFFICIAL LOGO

LOGO POSITION

LOGO DON'T

Properly logo placement for drawing reader's attention, brand recall and recognition

In every kind of reports, logo should be placed in right or left corner of the frame

Logo

The logo will be placed in a customized position as specified by the marketing department.

Logo

Don't place the logo in non-positioning

LOGO & APPLICATIONS

OFFICIAL LOGO

LOGO POSITION

LOGO DON'T

Things should not be done when using Logo in report

- ❑ Don't warp or stretch the Logo

- ❑ Don't crop the Logo in any way

- ❑ Don't change the Logo's orientation

- ❑ Don't apply shadows, glow effects, or outlines to the Logo

- ❑ Don't change the Logo's colors

- ❑ Don't use the Logo on busy photographs or patterns

- ❑ Don't rearrange the symbol or wordmark configurations within the Logo

- ❑ Don't use scanned or photographed copies of the Logo. Use the [original file](#) or ones in previous slide

DON'T

COLOR RULES - PALETTE

Orange is the defining color of Buzzmetrics and should appear consistently across all reports. Once orange is applied, the accompanying palette can be used to support and enhance the overall design. Refrain from using colors that may resemble those of YNM or Kompa.

ORANGE IS OUR SIGNATURE COLOR

Orange is our brand's signature color, crucial for recognition and consistency. It must be prominently featured in all reports to maintain a cohesive identity.

Dark Blue

RGB: 18 88 118
(#125876)

Orange

RGB: 230 130 40
(#e68228)

Light Orange

RGB: 230 150 80
(#e69650)

Sandy Orange

RGB: 250 190 140
(#fabe8c)

Grey

RGB: 150 150 150
(#969696)

Dark Grey

RGB: 95 95 95
(#5f5f5f)

Deep Grey

RGB: 51 51 51
(#333333)

Avoid **competitors' colors** to maintain brand strength.

BRAND TYPOGRAPHY - MAIN FONT

Aa

Inter

Aa	Bb	Cc	Dd	Ee	Ff
Gg	Hh	Ii	Jj	Kk	Ll
Mm	Nn	Oo	Pp	Qq	Rr
Ss	Tt	Uu	Vv	Ww	Xx
Yy	Zz	00	01	02	03
04	05	06	07	08	09

Font	Usage	Tier
Inter	For website (clean, modern, and readable): Priority for marketing materials and Google Slides . <i>Recommended weights: Regular (400), Medium (500), and Bold (700) for emphasis.</i>	Primary Typeface
SVN-Jeko or SVN - Mont	For social media (bold, dynamic, engaging) Used in campaign visuals, key announcements, and marketing graphics. Best for headlines and short impactful text.	Supporting Typeface
Tahoma or Verdana	For Proposals, Reports	3rd Tier (not recommend)
Roboto	For email communications to ensures readability and consistency in formal business writing.	Only for Email
Poppins	For creative and informal content: Used in ad campaigns, infographics, softer brand messaging.	3rd Tier (not recommend)

REPORT GUIDELINE

DATA VISUALISATION

DATA VISUALISATION - DO & DON'T

DOs

- Use appropriate charts & templates
 - Follow the color code guideline
 - Use full axis (start at 0)
 - Keep it simple, no animation
 - Use color for contrast & highlighting
 - Must have: Title, Unit, Timerange, Legend
 - Preferably include research platform
 - Ensure consistency:
 - Use the same color code across slides
- Maintain a consistent data order (Small → Large or Large → Small)
- Number format: XXX,XXX | %: XX.X%

DON'T

- Change chart styles partway through a comparison
- **Overload charts with unimportant data**, more than six colors, or too many animations
- **Use a pie chart**, especially one with more than seven wedges
- Use combinations with similar colors (red/orange and green, blues and greens)
- Sacrifice important data

DATA VISUALISATION - CHOOSING APPROPRIATE CHART TYPE

How can you choose the appropriate charts for your report?

To determine which chart is best suited for each of those presentation types, first you must answer a few questions:

1. How **many variables** do you want to show in a single chart? One, two, three, many?
2. How **many items** (data points) will you display for each variable? Only a few or many?
3. Will you display values **over a period of time**, or among items or groups?

WHAT IS THE USE OF NEEDED CHART TYPE?

Comparison

Distribution

Composition

Relationship

DATA VISUALISATION - GENERAL (BASIC CHART UNDERSTANDING)

DOUGHNUT/PIE CHART

When using?

- To compare parts of a whole
- To not show changes over time
- To be ideal for showing results of surveys although are slightly less readable than a stacked bar chart

LINE CHART

When using?

- To be great at showing change over time
- Basic line graphs are the most fundamental chart

CLUSTERED COLUMN

When using?

- To be best used to show relationships among individual data sets as well as each sets relationship to the broader whole

STACKED COLUMN

When using?

- To be useful when showing relative relationship of components
- Depending on the actual data being visualized, these charts can be difficult to read as the baseline of comparison varies with each column

CLUSTERED BAR CHART

When using?

- To be best used to show relationships among individual data sets as well as each sets relationship to the broader whole

STACKED BAR CHART

When using?

- To be useful when showing relative relationship of components.
- Results of survey information are easily converted to this format. This type of graph can represent units or percentages

DATA VISUALISATION - GENERAL (BASIC COLOR & EFFECT)

1. Chart color recommendations

There are 3 types of choosing colors

Buzzmetrics color palette – For full color version, please check Color Palette & Typography slide

Blending color palette - Primary color based on template's color or brand's color

Mixed color palette - The way of combining color based on your aesthetics

2. Chart design style

Buzzmetrics use **flat design (no effect) & plain chart background**, charts have a lot of metrics and data need to be showed so do not try to be an artist in chart drawing

Buzzmetrics use the smooth line in charting to express the softness & friendliness

DATA VISUALISATION - CHARTING (PIE/DOUGHNUT)

Detailed Charting Guidelines

- Only use pie charts when the total data adds up to 100% to ensure accuracy and to avoid overlapping fields in the chart.
- Limit the number of segments to a maximum of 5–6 to prevent visual clutter. If there are more than 6 segments, group the remaining ones (ranked 7th and beyond) into an "Other" category. You may include a small table to indicate which data points are grouped under "Other".
- Sort segments from largest to smallest, or follow a logical category order. If a custom sorting is preferred by the brand, feel free to apply it.
- Avoid 3D effects, shadows, or complex color gradients, as they can distort the data.
- Always display percentage values directly on the chart, rather than only in the legend. Percentages should be shown with one decimal place.
- If there are too many small segments, consolidate them into an "Other" category to enhance readability.
- Do not use pie charts for comparing multiple categories, as they are hard to interpret and can be misleading. Label data directly on the chart.
- Use color strategically.
- Number format: XXX,XXX | Percentage: XX.X%

Too many slices

Declared majors
% OF ANDERSON HALL RESIDENTS

De-emphasize

Declared majors
% OF ANDERSON HALL RESIDENTS

Declared majors
% OF ANDERSON HALL RESIDENTS

- Too many small slices
- Hard to read labels
- No clear focus
- Too many colors
- Key data lost
- Group small slices into "Other"
- Percentage not in format: XX.X%

PERCEPTIONS OF LIFE INSURANCE ACROSS DIFFERENT USER GROUPS

DATA VISUALISATION - CHARTING (TRENDLINE)

Detailed Charting Guidelines

- Used to illustrate trends over time and long-term patterns.
- Ensure a sufficient data range to display a clear and meaningful trend.
- Avoid using too many trendlines in a single chart—focus only on the most relevant trends.
- Use distinct colors or line styles to differentiate trendlines from the main data series.
- Clearly label the y-axis and trendlines to avoid misinterpretation.
- Maintain a consistent number format across the entire report.
- No Grid, Clear Background
- The axis should be spaced out appropriately.
- On the chart, only label 4 to 5 units at most — no more.

For example, if the maximum value is 100K, the major unit should be 20K or 25K, not 10K.

Time-based trendlines must always include annotations for peak points, which should specify: **Source – Content – Link**.

- Data is blurry
- Numbers do not follow the format: XXX,XXX
- Left vertical axis lacks clear units
- Right vertical axis has no labels, causing confusion about the number of cases

TOP 10 NHÓM NGÀNH (KHÔNG HOẢNG TRUYỀN THÔNG)

TỔNG QUAN THẢO LUẬN VỀ CHIẾN DỊCH THỎ BAY MÀU x LIÊN QUÂN MOBILE

Time Range: 1/1 - 29/1/2024.
Source: Facebook, online newspapers, forums, YouTube, e-commerce, blogs, reviews, and TikTok.

DATA VISUALISATION - CHARTING (COLUMN/BARS)

Detailed Charting Guidelines

- Best for comparing categories, groups, or tracking trends over time.
- Ensure even spacing between bars/columns for visual clarity.
- Sort data logically (Small → Large or Large → Small) for better readability.
- Always start the axis at zero to avoid distorting proportions.
- Use colors to highlight key data points but avoid excessive color variations.
- Always include Title, Unit, Time Range, and Legend.
- Keep it simple, avoid animations or unnecessary effects.
- No Grid, Clean Background

- Axis does not start at zero
- Data is not sorted logically
- Column sizes are not proportional, should be sorted from high to low

TOP 10 CHIẾN DỊCH NGÀNH BẢO HIỂM NHÂN THỌ ĐƯỢC NHẮC ĐẾN NHIỀU NHẤT

N = 17,093,694

Time Range: 1/1/2019/2024
Source: Facebook, online newspapers, forums, YouTube, e-commerce, blogs, reviews, and TikTok.

DATA VISUALISATION - CONSISTENT FORMAT

1. Text & Chart combination

Clear data value label in charts by choosing suitable color & position

- **Color** of data label should distinguish with chart color
- **Position** of data label should be fit perfectly in chart or totally detached from chart

2. Chart element display

- Keep the text of all chart elements short, clear, and fully visible.
- Remove unnecessary or very small data labels to improve chart readability (1). If they cannot be removed, consider using an alternative way to present the data (2).
- Maintain consistent formatting of all chart elements throughout the entire report.
- The font used in charts must be consistent with the report's overall font. Note: some files may default to Arial or Calibri for charts — make sure to review and adjust accordingly.
- The font size of data values in charts must not be larger than the size of field labels. If you need to highlight a specific number, use a circle or bold formatting to emphasize it.
- Percentage-based charts must always include a clearly stated base.

DATA VISUALISATION - INSIGHTFUL RECOMMENDATIONS

1. Enough Information

High quality charts should provide enough information for data visualization, including:

- **Base of data** - Do not forget the base of data if chart illustrates value under type of absolute numbers
- **Data unit (Axes)** - If there are more than two variables/units in your chart, cautiously describe the axis of each variable/unit
- **Chart title** Every chart needs to have its own title and should be one line only.

Visual Tips: Use icons, image or logo instead of text only. *(Eg. If there are two pie/doughnut charts lying next to each other with the purpose of conducting the comparison or contrast between two objects, just need one title and distinguish by object logos)*

- **Legend** - Colors of legend should be consistent when having same items in chart and remember to keep the text of legend short, clear & fully displayed.

Note: Please be flexible to place the legend in appropriate position based on the rest of slide space.

2. Data combination

- **Via Chart:** Combine more than one chart *(Ex: Pie Chart with Stacked Column - (1))*
- **Via Data:** Use the different ways in number reporting *(Ex: Show relative or absolute numbers in chart legend - (2))*

DATA VISUALISATION - ESSENTIAL HIGHLIGHTED RECOMMENDATIONS

1. Project understanding

Understand the main focused metrics in report to highlight flexibly & accordingly.

2. Visual highlight tips

For detail explanation & data emphasis, we can:

- **Size:** Enlarge slice size of pie chart to highlight its significance
- **Style:** Highlight or distinguish this metric by using others pattern style – (1)
- **Color:** Hide one or more less important slices by matching their color to background color to highlight other slices
Eg: Neutral in sentiment chart – (2)
- **Data Label:** Only show the value influencing to your analysis, no need to show all of labels you have – (2)

 **BUZZMETRICS**

RESEARCH OBJECTIVE

- **Understand key insights** of pharmacy brands' activities and discussion on social within the last two years and any changing movements.

- Investigate consumers' **reactions to social activities about pharmacies**. Uncover **influencing factors which trigger customers' interest** on social
- Figure out **potential segments, content information** which will feed in for social activities

RESEARCH QUESTION

- How is **pharmacy brand's social presence** this quarter?
- **What are consumers talking about** express brands?

- **Key players' performance** in the category and its influence on consumers' feedback & interest.
- **Influencing points which attract consumers' attention** through socials.
- **Themes of discussion** engaging most customers' feedbacks and reason why

KEY OUTCOMES:

Find out the strength & weakness of each brand, and mapping with brands' communications on social to find white space for **Trung Sơn Pharma**.

Research Terms

Buzz Volume

One post on Facebook OR article on news site OR each comment or reply to that post

Relevant Buzz

Number of conversations engage with news, topics, events, activities, etc. of brand

Mention

Number of relevant buzz, which contains keywords, hashtag mentioning brand name

Share of voice

Share of buzz volume of all brands across platforms (Facebook, Online News, Forums, Blogs, Reviews, YouTube & Ecommerce)

Growth by percentage point = % of current value - % of previous value
(percentage change)

Definition of metrics

Average buzz = total buzz/number of post

Brand/product relevant = brand product relevant buzz/total buzz

Intention ratio = intention buzz/total buzz

Sentiment score =
$$\frac{\text{Positive feedback} - \text{Negative feedback}}{\text{Positive feedback} + \text{Negative feedback}}$$

The ratio will show the user's feelings towards the Brand. This score is from -1 to 1, where:

- -1 indicates negative sentiment
- 1 represents emotional positivity
- 0 represents a neutral attitude.

Color Code

Positive

- Like the brand/campaign
- Express favorable attitude toward the brand/product
- Submissions to activities showing brand/product evaluation
- Sharing **positive organic posts** about brand/product
- Sharing brand posts WITHOUT requirement

Negative

- Dislike the brand/campaign
- Express negative attitude toward the brand/product
- Sharing **negative organic posts** about brand/product

Neutral

- Mentioning the brand without expressing a sentiment
- Submissions to activities NOT showing brand/product evaluation
- Sharing brand posts WITH requirement

Why is that? Because competition in the banking industry is highly intense.

- Nearly 50% of banking-related discussions come from users → Social media is a crucial channel where users share opinions, ask for information, and influence each other's behavior.
- Meanwhile, more than 40 banking brands account for only 11% of the total share of conversation → The competition among brands—and against other entities—is extremely fierce. The banking industry's challenge is not just about winning Share of Voice (the conversation share among brands) but also Share of Attention (competing for user attention against other content) to effectively engage the target audience.

SHARE OF VOICE

[BRAND LOGO]

INSIGHT

Gen Z is the future customer segment for many industries in general and the banking sector in particular.

This customer group is challenging for most brands and industries to grasp, as they have distinct expectations compared to other segments, and the nature of Gen Z's preferred channels makes it difficult for brands to reach.

MEANING FOR MARKETING

Serving the current customer group well while preparing for future customers. Any brand that discovers the formula to engage Gen Z first will gain a long-term competitive advantage.

Currently, some brands have started modernizing their approach to reach younger audiences and have received positive feedback from Gen Z. These brands have a strong ability to stay updated with trends and are more likely to create a viral impact on social media compared to others.

To maintain a competitive advantage, refreshing messaging, content, and evolving outdated approaches are essential to staying well-connected with different user groups.

Continue utilizing minigames to sustain/increase discussion volume and AWO (mapping with consumer insight) to build interest & organic engagement.

- Continue sharing content relating to health and wellness concerns.

Leverage more of brand staff's channel to build content along with increase social presence.

- Can be utilized to communication on local selling groups or health-related groups to promote the brand's service.
- Content can be more personalized based on topic and adopt a friendly, humorous tone ☐ **Focus on groups and TikTok.**

Utilize more of the brand's TikTok with snippets of livestreams or short-videos on health information sharing, entertainment.
